RE: Linda J. Messick
D.O.B.: 12-13-53

To whom it may concern:

Mrs. Messick has been under my care since August of 2001. Her allergic reactions include an anaphylactic reaction. She has a known sensitivity to molds and I feel the symptoms are made worse by the application of biosolid fertilizers that have been applied to neighboring farms. She has remained symptom-free since the last episode occurring after the last fertilization procedure. I, therefore, feel she should not be exposed to any further deposits of the fertilizer and would recommend that the applications of the biosolid fertilization products not occur in the neighboring farms. I feel most likely this is a hazard to her health.

Sincerely yours,

Robert C. McQueen, M. D.
